## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of Group I in the reply filed on 09 December 2004 is acknowledged.

### ***Response to Amendment***

2. Applicant's amendment filed 09 December 2004 cancels claims 4-9, 13-18, 20-24, and 26-30. The amendment has been fully considered and entered.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-3, 10-12, 19, 25 are rejected under 35 U.S.C. 102(e) as being anticipated by Safadi, U.S. Patent No. 6,810,525. Referring to claims 1, 10, 19, 25, Safadi discloses a system for multimedia services wherein a user requests use of a specific data services by creating a secure entitlement token that can be authenticated by a client application at the subscriber terminal based on a credit amount (Col. 1, line 62 – Col. 2, line 10, Col. 3, lines 11-17), which meets the limitation of providing a network file system on said client, when said network file system handles and forwards all requests from local processes on said client that are directed at application program files located on said server, wherein said file system examines each of said requests, and either grants or denies each of said requests depending on whether the request is

Art Unit: 2132

justifiable from a security perspective by using information that includes, but is not limited to: the nature of the originating process, the history of previous access by the process, and/or the section of the targeted file being requested. The client application then sends the entitlement token to a proxy server in order to determine the status of the subscriber's request, and if the request was verified then enabling the selected service/application for use by the subscriber from ISP (Col. 2, line 11-24), which meets the limitation of providing a network redirector component of said network file system, and wherein said network redirector component makes visible to said network file system, a path that represents the server where said application program files are stored.

Referring to claims 2, 3, 11, 12, 19, 25, the client application of Safadi would meet the limitation of the dispatch routine that examines the file requests and decides whether to grant or deny said file request (Col. 2, lines 1-10, Col. 3, lines 11-17).

### ***Conclusion***
